AutoShutdown Rst Crack +

AutoShutdown Remote Desktop is a simple-to-use gadget that lets you manage your desktop remotely from your notebook, via a USB dongle. It allows you to log in or log off to your Windows desktop, shutdown the computer, and restart it in a few simple clicks. The gadget's interface is based on a small and intuitive layout. You can log in or log off your computer remotely, and choose to have the desktop automatically restart if you want to run a program again on a fresh start of your laptop. It also has a unique feature, found only in this gadget, that allows you to log off your computer in a couple of clicks, from any remote computer. And, despite what some people might think, it is possible to set that function to occur automatically - just specify a time when you want it to happen. By accessing the 'Quick Launch' menu you can launch 'Settings' where you can, for instance, schedule the function to occur automatically - or select another laptop to which you want to connect, and if needed, specify a name or password for remote access. By clicking on 'Add a shortcut', you can add a shortcut on your desktop to quickly log off remote desktop. Thanks to its GADGET format, you can configure some settings provided by Windows, such as moving AutoShutdown Remote Desktop anywhere on the desktop, making it stay on top of other applications, and adjusting its opacity level between 20% and 100%.

AutoShutdown Remote Desktop Description: Gadget Auto Shutdown is a simple-to-use gadget that lets you manage your computer from another computer running windows and schedule a power management function for your computer, directly from your desktop.
