I'm receiving a "The XML dump contains 0 rows and 0 column for the test file. Reason: The requested XML dump failed to find any cell tables" error when running a macro on a spreadsheet that isn't being produced from VBA code. However, when I unprotect it and run the macro from the workbook the code works. I'm trying to figure out if there is a way to get it to work when the macro is being run from the code. A: First, there is no way to get it to work when the macro is being run from the code. The code you provide is not valid for reasons known only to you. Second, according to Office Excel 2007, the XML dump works only when working with files that are created by VBA. So your code is failing, not just the XML dump. How to find the root cause? Separate the macro from the calling module. Make the calling module part of a Workbook_open() event. Integration A Method to Validate Our Journeys
