softwareQ: How do I read a file in a
memory stream? I would like to read a file
in a memory stream, from my client
application. I know that I can use:
`File.OpenRead("c:\temp\myfile.txt")` But
this requires I first create a physical file and
read from it. What I want to do is read the
file in memory and only have the memory
stream, and not the physical file. I don't
want to save the memory stream to the hard
drive. Does anyone know how I can
accomplish this? Thanks, Chris A: If you're
running.NET 3.5, you can use the

File.ReadAllBytes(path) method. If you're running .NET 2.0, you can use the System.IO.File.ReadAllBytes(path) method.

Breast cancer-related lymphedema (BCRL) is the most common and disabling complication of treatment for early-stage breast cancer. About a quarter of women with BCRL experience treatment-related symptom exacerbations. BCRL is frequently treated with wearing a compression sleeve, which does not correct the underlying lymphedema (LE). We performed an initial pilot study to identify biologic markers for which longitudinal measurements can predict treatment outcomes and identify potential targets for treatment. We found that the volume of the subcutaneous tissue significantly decreased at a rate of about 4.2 cm³ /month (cm³ /month) during treatment

with the compression sleeve 5b5f913d15

The Many Faces of Genomics. The issue of defining a gene has always been a source of controversy. This controversy has been intensified as the genome is now being sequenced and bioinformaticians are picking through it trying to find out what genes are. Now, with the emergence of genomics, it's becoming more and more likely that the genome is not made up of genes, but that there are many different forms of information stored in a genome that could be packaged into genes or otherwise read in the way we think of genes.

Q: onItemClick for a list view, passing arguments to another activity I'm trying to pass an argument to an activity

when I click on a list item. I've tried this:

```
//the ListView
```

```
list.setOnItemClickListener(new  
OnItemClickListener() { @Override public  
void onItemClick(AdapterView adapter,  
View v, int position, long id) { String game  
= ("Item"+position); Bundle bundle = new  
Bundle(); bundle.putString("item", game);
```

```
Intent gameView = new
```

```
Intent(GameList.this, PlayGame.class);
```

```
gameView.putExtras(bundle);
```

```
startActivity(gameView); } }); And I've
```

```
tried passing the variable game into the
```

```
PlayGame activity: public void
```

```
onCreate(Bundle savedInstanceState) {
```

```
super.onCreate(savedInstanceState); setContentView(R.layout.activity_play_game);
```

```
Bundle extras = getIntent().getExtras(); if
```

```
(extras != null) { String game =
```

```
(extras != null) { String game =
```

```
extras.getString("item");  
Log.v("item",game); TextView textView =  
(TextView) findViewById(R.id.itemText);  
textView.setText(game); } } And in  
onCreate I'm trying
