Developer: Irreducible Games Publisher: Oculus VR Release Date: TBA (2018)In order to quickly turn a common experience into one with enduring appeal, the designers of communication products typically take it to the extreme. It's no surprise then that conceptual art experts like Cildo Meireles, or common knowledge theorists like Michel Serres, have shown that extreme communication products like the revolver or the rifle, not even to mention the diamond, the ostrich egg and the iron maiden, would be too ordinary. Because they do not have to make people understand what they want or say, they are completely dependent on the silent and invisible force that holds them together, that of which they make their very livelihood, the Symbiotic relationship between the human being and the communication product. And it is at this link, this intersection of the human being and the communication product, that my new book is going to offer much insight. Related to Jürgen Habermas' theory of communicative action, and referring to the recent work of Jacques Baudrillard on hyperreality and the rhetorical act, my book deals with this situation of permanent conflict existing between the communication product and the human being that makes the product an integral and inseparable part of ourselves. While the communicative action relates to the politically charged issue of language, and the rhetorical act to the mnemonic power of words, my study is interested in the permanent, invisible force that holds together the human being and the communication product. My thesis is that, for good or for bad, this force is currently the healthy symbiosis between the human being and the communication product. The book is based on a series of semiotic and post-semiotic experiments that I performed at the Science and Technology Park of Porto in Portugal, from 2005 to 2009. The larger part of the book deals with the concept of the esoteric signifier. It analyses the importance of the linguistic function for fiction, the signifier-signified relationship in the public realm and the role of the signifier for organizing the world of so-called mass communication. Meanwhile, the thesis was published as a book: The Linguistics of Communication (Frankfurt am Main: Peter Lang, 2008).Q: How does the fscanf function work in C? I was reading the book learn C the easy way and when the author described the fscanf function he wrote, printf will print the string "3
